DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed 21 February 2007 have been fully considered but they are not persuasive. Applicant has argued that the U.S.C. 102(b) rejection in view of Nadal et al. (European Patent Number 0757904 A1) should be withdrawn because the claim language pertains to a plurality of hoops disposed in a helical configuration, a feature Applicant asserts is not present within the Nadal reference. However, as can be seen in Figure 2 each hoop (19a, 17a, 15a, 13a) contains a segment which extends both circumferentially and helically around the longitudinal axis (11) in substantially the same configuration as the claimed invention, for clarification a copy of Figure 2 with modified labels has been provided below.
2. Although a similar reference was applied previously by another Examiner the current Examiner maintains that the Nadal reference anticipates the claimed invention.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 3738

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1- 4, 14-16, 18-21, 23, 25-27 and 29-31 rejected under 35 U.S.C. 102(b) as being anticipated by Nadal (European Patent Number 0757904 A1).

5. Nadal discloses an intraluminal stent comprised of a plurality of circumferential hoops disposed in a helical succession along the axis of the stent wherein the hoops are comprised of elements defined by substantially straight struts connected by apex sections alternately pointing in opposite axial directions, the intraluminal stent further comprising connecting members between adjacent hoops wherein the hoops can be either directly connected or connected by means of a bridging member.

6. Nadal further discloses an intraluminal stent wherein an apex section comprises two struts attached thereto and one strut is longer than the other strut. See Figures 2, 3, 5 and 6.

7. Nadal also discloses an intraluminal stent wherein the apex sections are comprised of a uniform angle except for selected apex sections having a non-uniform angle, the non-uniform angle apex sections configured to align a first strut with a second strut in an adjacent hoop. See Figure 8.

Allowable Subject Matter

8. Claims 5-13, 17, 22, 24, and 28 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

9. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).
10. A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
